OPERATIONAL SERVICES

Tranax makes your ATM ownership experience as easy as possible.

WebRMS is a web-based monitoring and cash management solution that ensures a reliable network of ATMs. Instant alerts on your cell phone and via email, as well as online access to electronic journal records, allow you to monitor the health of your ATMs 24/7. WebRMS increases your ATMs' uptime and lowers your operational costs.

TranRMS is a software application that delivers the ability to monitor your entire ATM network directly from a PC. Retrieve status, bill count and average transaction data, as well as download and store electronic journals. TranRMS also gives you detailed error, reject, and transaction data, plus the ability to change non-transactional settings on the ATM. With TranRMS you can remotely initialize the ATM, download AP software, graphic advertisements, and create an interface to schedule your PC to dial into your machines automatically or at regular intervals to retrieve status and journals.

Tranax Extend offers ATM owners a worry-free investment in a Tranax ATM beyond the standard manufacturer's warranty. If a component of an ATM covered under Extend is in need of repair, Tranax will promptly ship a working replacement part at no charge.
